Art Unit: 1632

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, 22 and 23, drawn to methods of manufacturing a tissue matrix, a tissue matrix and a method of treating a patient by implanting the tissue matrix, classified in class 424, subclass 93.2.
- II. Claims 13-21, drawn to an isolated placenta, method of culturing a placenta, isolated placenta stem cells and a pharmaceutical composition comprising the stem cells, classified in class 435, subclass 325+.

The inventions are distinct, each from the other because:

The inventions of groups I and II are distinct because they are of separate uses. The tissue matrix of group I can be used in organ/tissue replacement protocols. The stem cells of group II can be used to treat disease by the direct administration of stem cells.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1632

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
